

AI: Claude Code (skills, subagents), MCP, Claude API, Gemini API, Vector DB, Vercel AI SDK, RAG, Langfuse, Langchain, Langgraph
Infrastructure & Data: SQLite, Docker, Postgres, dbt, Redis, Azure Event Hub, tRPC, GraphQL, REST, Jest
Languages & Frameworks: TypeScript, JavaScript, Python, SQL, React, Next.js, Node.js

Professional Experience

Token Terminal

Philadelphia, PA

Applied AI Engineer

Mar. 2025 – Feb. 2026

Sole AI engineer defining and executing the company's applied AI strategy across product and internal tooling

- Modeled Token Terminal's financial domain, entity relationships, data availability, and semantic nuances like distinguishing "fees on Ethereum" from "Ethereum fees", into a structured resolution layer using SQLite, becoming the shared foundation for every AI surface
- Built an agent on that layer using Claude Haiku with prompt caching that resolves multiple ambiguous entities to internal IDs with relevant context in ~6 seconds for ~\$0.01 per call
- Shipped that resolution capability as an MCP server leveraged by analysts at crypto VCs managing \$15B+ AUM, consolidating 10+ tools to 4 and reducing context per call from ~20K tokens to ~200 with progressive disclosure
- Generated table and column descriptions across 10K+ tables in a 2PB BigQuery data warehouse using Gemini's 1M-token context window, creating the metadata layer that makes the warehouse queryable by agents
- Engineered a text-to-SQL agent over that warehouse, leveraging the generated metadata and entity definitions to accurately query across thousands of tables, reducing analyst time-to-insight from 10+ mins. to under a min.
- Codified the company's data taxonomy, business logic, and engineering standards into structured AI context files, and authored custom skills and commands that accelerated AI-assisted development across the team

The Rounds

Philadelphia, PA

Staff Software Engineer (Tech Lead)

Sep. 2024 - Mar. 2025

- Crafted an AI-assisted customer service agent using Langchain with tool-calling for multi-step reasoning
- Drove company-wide AI adoption as the go-to LLM resource, leading prompt engineering workshops
- Halved warehouse packing times by rolling out a new version of the packing app to support batch sessions
- Proposed and implemented flexible delivery days, increasing average order value by 31%
- Architected a headless CMS with interchangeable designs and personalized content for the Discovery page

Senior Software Engineer II (Tech Lead)

Jun. 2022 – Sep. 2024

- Cut order pack errors by 65% after developing a new packing app, enabling the delivery of 5MM+ products
- Led the technical implementation for warehouse consolidation, reducing operational costs by 10% weekly
- Implemented product catalog geofencing, unlocking temperature-controlled and regulated products

Gopuff

Philadelphia, PA

Senior Software Engineer (Tech Lead)

Apr. 2021 - Jun. 2022

- Developed a platform-agnostic ordering engine, launching an Uber Eats integration worth \$10M in new revenue
- Improved driver utilization efficiency 10% by partnering with Data Science teams to build a forecasting models
- Coordinated with Gopuff's mobile team to deploy new order state management APIs to support the app launch

Freelance Work

Claude Job Search OS: Automates research, prep, and pipeline tracking while keeping all outbound comms. human
Captain (South Indian Movie): Acted as the "Referee" alongside Jayasurya in the acclaimed South Indian movie

Education

B.S. Computer Science at Drexel University, Philadelphia, PA
